

MICROSCOPY DESIGNED FOR STUDENTS IN LABORATORY WORK AND FOR PRACTITIONERS

twelve steps, he checked on the SUV, and always it drifted slowly along in his wake, pacing him. Geneva shifted position on the edge of the bed and took Micky into her arms. The great warmth of her. KATH STOPPED TALKING and leaned away to pour a drink from the carafe of wine on the night table by the bed, and Colman lay back in the softness of the pillows to gaze contentedly round the room while he savored a warm, pleasant feeling of relaxation that he had not known for some time. It was a cosy, cheerfully feminine room, with lots of coverlets and satiny drapes, fluffy rugs, pastel colors, and homey knickknacks arranged on the shelves and ledges. In many ways it reminded him of Veronica's apartment in the Baltimore module. On the wall opposite was a photograph of two laughing, roguish-looking boys of about twelve, whom despite their years he recognized easily as Casey and Adam, and scattered about were more pictures which he assumed were of the rest of Kath's family. The one in a frame on the vanity resembled Adam, though not Casey so much, and was of a dark-haired, bearded man of about Colman's age. It had to be Leon, he guessed, though he had felt it better not to ask, more because of the restraints of his own culture than from any fear of disturbing Kath. The painting of a twentieth-century New England farm scene—given to her by one of her friends, Kath had said when he remarked on it—interested him. Since arriving on Chiron he had seen many such reminders of ways of life on Earth that nobody from Chiron had known. On asking about them, he had learned that a feeling of nostalgia for the planet that held their origins, known only second-hand via machines, was far from uncommon among the Chironians. "Would it make any difference to your problem if I had?" "Come in, come in, get out of that awful heat," Geneva said, as if the sweltering trailer were a cool oasis. Jay blinked and looked up to find Pernak watching him curiously. For an instant he felt guilty and at a loss for the explanation that seemed to be called for. "Bernard told me about it," Pernak said before Jay could offer anything. "I guess he's under a lot of pressure right now, so don't read too much into it." He stared at the box in Jay's hand. "I don't see anything—not a damn thing. Come on, Jay. Let's take a look at that loco of yours." Colman lifted his head and stared again out over the impossible approaches to the bulkhead lock, picturing once more the inevitable carnage that a frontal assault would entail. Who on either side would stand to gain anything that mattered to them? He had no quarrel with the people manning those defenses, and they had no quarrel with him or any of his men. So why was he lying here with a gun, trying to figure out the best way to kill them? Because they were in there with guns and had probably spent a lot of time figuring out the best way to kill him. None of them knew why they were doing it. It was simply that it had always been done. Chapter 15 dedicated his life to the saucer circuit. Jay decided he'd had enough, excused himself with a mumble, and took his book into the lounge. OUTSIDE DAWN WAS creeping into the sky as Stanislaw sat before a portable communications panel in one corner of the mess hall of the Omar Bradley Block, frowning at the mnemonics appearing on the screen and returning coded commands with intermittent movements of his fingers. Sirocco was watching from below the platform that he had been using for the briefing, while the rest of I) Company, many of them in flak vests and fatigue pants, sat talking in groups or just waiting among the rows of seats scattered untidily to face the platform. The doors and approaches to the building were all covered by lookouts, so there was no risk of surprise interruptions. "What about me?" Ci asked, hooking at Driscoll. She leaned to one side to let her mother see the hand she was holding. shoes and up into the mother ship." Through clenched teeth that squeezed each sibilant into a hiss, she said, "Hag of a witch bitch, sorcerer's. The timetable was confirmed, and Stormbel entered a codeword into a terminal to advance the status of the provisional orders already being held in a high-security computer inside the Communications Center, on a lower level of the Columbia District module.."What else can you do?" Juanita asked..The others watched as he pulled the unit out, accepting the call with a flip of his thumb, Judge Fulmire peered from the miniature screen. "Are you alone, Paul?" Fulmire asked without preamble. His voice was clipped and terse.."Would you expect me to say so if it was?" Colman asked. -."You really wanna know?" An intense note had come suddenly into Driscoll's voice..The capsule arrived, and Jay fell silent while he digested what Pernak had said. As they climbed inside, Jay entered a code into the~ panel by the door to specify their destination in the Jersey module, and they sat down on an empty pair of facing seats as the capsule began to move. After a short run up to speed, it entered a tube to exit from Maryland and passed through one of the spherical intermodule housings that supported the Ring and contained the bearings and pivoting mechanisms for adjusting the module orientations to the ship's state of motion. For a brief period they were looking out through a transparent outer shell at the immensity of the Spindle, seemingly supported by a web of structural booms and tie-bars three miles above their heads, with the vastness of space extending away on either side, and then they entered the Kansas module where the scene outside changed to animal grazing enclosures, level upon level of agricultural traits, fish farms, and hydroponics tanks..whenever they need it. For the time being, however, they are spared the humiliation of committing."Easy, easy now," Micky counseled, still on her knees, making placating gestures with her hands.."How else could it be?" Adam said when Colman asked him about it. "Sure they had to learn how to use a gun. You know what kids are like. The machines couldn't be everywhere all the time. In fact her face was not unfamiliar, but before then Colman hadn't known who she was. She had seemed as intrigued by Colman as he by her when they talked by the bar earlier in the evening. "Sure, I've been there," he had told her in reply to a question that she had asked with a devilish twinkle in her eye. -Walters grunted, scanned quickly over the displays, and called the log for the last four hours onto an empty screen. "Looks like we're in for another strip down on that goddamn pump," he murmured without turning his head. "Looks like it," Fallows agreed with a sigh..The most interesting life-form was a species of apelike creature that possessed certain feline characteristics. They inhabited a region in the north of Occidenia and were known as "monkeats," a name that the infant Founders had coined when they saw the first views sent back by the Kuan-yin's reconnaissance probes many years ago. They were omnivores that had evolved from pure carnivores, possessed a highly developed social order, and were beginning to experiment with the manufacture of simple hand tools. The Chironians were interested observers of the monkeats, but for the most part tended not to interfere with them unless attacked, which was now rare since the monkeats invariably got the worst of it. Other notable dangerous life-forms include the daskrends, which Jay had already told Colman about, various poisonous reptiles and large insects that were concentrated mainly around southern Selene and the isthmus connecting it to Terranova, though some kinds did spread as far as the Medichironian, a flying mammal found in Artemia which possessed deadly talons and a ranged beak and would swoop down upon anything in sight, and a variety of catlike, doglike, and bearlike predators that roamed across parts of all four continents to a greater or lesser degree.."I agree," Marcia Quarrey said. She looked at Borftein. "If that's the case, then sending in the SD's would only confirm their fears. It would be the worst thing we could do."..disposal. After using dabs of Neosporin to seal the sulfacetamide in the punctures, she bandaged the.."It is," Adam agreed readily. "But modesty and self-effacement aren't the same thing either."..Colman was listening grimly. "What about his wife?" he muttered to Sirocco..Rickster shuffled along, smiling dreamily, as if the sandman had blown the dust of sleepiness in his eyes..Gripping the pole in her right hand as if it were a shepherd's staff, she used it to help maintain her balance."Are you telling us we're prisoners?" the Chironian man asked..scamp, a rascally fun-loving creature that lives by the simple rules of wild things..Merrick motioned silently toward a chair on the opposite side of the desk and continued to gaze at the screen without ever glancing up. Fallows sat. After some ten seconds he began feeling uncomfortable. What had he done wrong in the last few days? Had there been something he'd forgotten?... or failed to report, maybe?... or left with loose ends dangling? He racked his brains but couldn't think of anything. Finally, unnerved, Fallow managed to stammer, "Er .. you wanted to see me, sir.".."He ought to be given a chance to go and look at it," Borftein agreed with a nod. "What would be the best way to arrange something like that?"..He's sincere in his intention to pay for what he takes, but nevertheless he feels like a criminal.."Forget it," Colman interrupted. "It happens to everyone. Let's leave it with all the other stuff that's best left up there."..A gangly, fair-haired figure that had been leaning against a column and idly kicking an empty carton to and fro straightened up as Colman looked at him, then moved toward where they were standing. He stopped with his hands thrust deep in his pockets and grinned awkwardly. Colman stared at the boy in surprise. It was lay Fallows. "What the hell are you doing here?".."Don't bother looking," Colman said. "He's got the late duty " ..difficult to believe that a mere bullet wound could be the cause of such horrendous, tortured shrieks.."Really? Who?" Colman asked..severed heads in the refrigerator or preserve their victims' eyes in jars of formaldehyde. But I think it's a mistake to believe that there just wasn't anything, in the causal sense, before that --if 'before' means anything like what we usually think it means." Pernak sat forward and moistened his lips. "TII give you a loose analogy. Imagine a flame. Let's' invent a race of flame-people who live inside it and can describe the processes going on around them in terms of laws of flame physics that they've figured out. Okay?" lay frowned but nodded. "Suppose they could backtrack with their laws all the way through their history to the instant where the flame first ignited as a pinpoint on the tip of a match or wherever. To them that would be the origin of their universe, wouldn't it.".."No. She's wasted on crack cocaine and hallucinogenic mushrooms. The only way old Sinsemilla could..Geneva's backyard. Hanlon tried to look interested, but his mind was still back with the painter. After a few seconds he looked at Colman. "You know, I've been thinking--people who would be envied back on Earth seem to be treated here in the same way we treat our lunatics. Do you think we're all crazy to the Chironians?" .might simply have absorbed Curtis's mood..She goes..something.. "Coffee?" Geneva inquired.
